

Many U.S. technology companies have manufacturing operations in China while also selling to Chinese businesses and/or consumers. Companies with substantial exposure to the slowdown in China include big tech brands such as Apple, Dell, Hewlett Packard, Intel, and Qualcomm, as well as many smaller tech businesses.<sup>5-6</sup>

Vehicle manufacturers throughout the world rely on Chinese-made parts, and many have plants in China. General Motors (which sells more cars in China than in the United States), Ford, Toyota, BMW, Honda, Nissan, Tesla, and Volkswagen all suspended operations in China, while Hyundai and Renault closed plants in South Korea, and Fiat Chrysler closed a plant in Serbia, all due to parts issues.<sup>7-9</sup>

Global retailers including Apple, Ikea, Levi Strauss, McDonald's, KFC, and Starbucks temporarily closed stores in China.<sup>10-11</sup>

In addition to disruptions in the global supply chain and Chinese consumer market, the tourism industry in the United States, Europe, and other Asian countries may be hard hit by the absence of Chinese tourists. One estimate suggests a loss of almost \$6 billion in U.S. airfares and tourist spending.<sup>12</sup>

Although it is too early to measure the full effect on global business, a private report released on February 21 indicated that U.S. business activity had slowed in February to the lowest level in six years, with the biggest hit to the service sector, where travel and tourism are major components. The report also indicated a sharp drop in Japanese business due to lost tourism and export orders. Exports were down in Germany, but the initial impact on the eurozone was minimal.<sup>13</sup>

## Oil Pressure

China is the world's largest importer of crude oil, and Wuhan is a key center of its oil and gas industry. The prospect of lower demand drove oil prices into bear-market territory — defined as a drop of 20% from a recent high — in early February. Prices rose later in the month but dropped again with news that the virus may be spreading. Natural gas prices have also been hit by the prospect of lower growth in Asia. While lower prices may be good for U.S. consumers, oil-exporting nations, including the United States, will face lower revenues, and energy companies that are already on rocky ground may struggle.<sup>14-17</sup>

## Market Reaction

In late January, the Dow Jones Industrial Average lost 3.7%, due in large part to concerns about the virus.<sup>18</sup> The market bounced back quickly, setting new records in mid-February, but weak business news and a rash of cases outside China sent the Dow into correction territory (a decline of 10% from a recent high) on February 27.<sup>19</sup> This suggests that the market may be volatile for some time, and future direction might depend on the progress of disease control and emerging information on the impact of the virus on U.S. and global businesses.

## Global Growth Outlook

Anything that affects China, the world's second-largest economy, can have a powerful ripple effect around the globe. An early February report by Moody's Analytics estimated that every 1 percentage point reduction in China's real gross domestic product (GDP) will reduce global GDP outside China by 0.4%. The report projected that disruption caused by the virus would cut more than 2 percentage points off China's GDP growth in the first quarter of 2020 and result in a loss of 0.8% growth for the year. This in turn would cause a loss of about 0.3% in annual global GDP growth outside China and about 0.15% in the United States. Moody's lowered its projection for 2020 global growth from around 2.8% to 2.5%.<sup>20</sup>

In a February 16 forum, Kristalina Georgieva, managing director of the International Monetary Fund, was more optimistic, suggesting that the virus might shave only 0.1% to 0.2% off the IMF's 2020 global growth projection of 3.3%. Georgieva cautioned that there was still a "great deal of uncertainty" and emphasized that the extent of the economic damage depends on the length of the disruption. If the disease "is contained rapidly," she said, "there can be a sharp drop and a very rapid rebound."<sup>21</sup>

Although it's natural to be concerned about the virus — on a human level as well as its potential effect on the global economy — it is important not to overreact to short-term market swings. A well-balanced portfolio appropriate for your long-term goals and risk tolerance could help you weather the current volatility.

*All investments are subject to market volatility and loss of principal. Investing internationally carries additional risks such as differences in financial reporting, currency exchange risk, as well as economic and political risk unique to the specific country. This may result in greater share price volatility. Shares, when sold, may be worth more or less than their original cost.*
